

Working Online as A Student :- Web Development

By Doreen Chemweno,
Women Techmakers Eldoret Lead
Web Developer.

WHAT IS WEB DEVELOPMENT?

Web development deals with the creation of pages accessible via the internet. This process is done by a **Web Developer**

Web Development has two major divisions namely :

- Frontend Development
- Backend Development

The Learning Process

Self-Learning

**Since most of us learn this out of school
curriculum, I will focus on that type of
Learning**

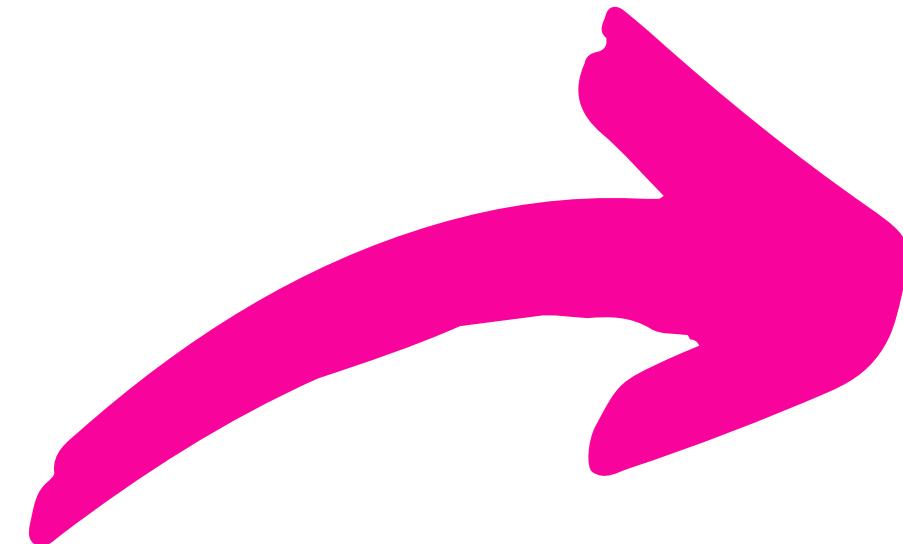

Teaching yourself a skill requires
**commitment, consistency and lots of self-
motivation.**

FREE LEARNING TOOLS ONLINE

Learning web development can easily be done online through websites like

- youtube
- freecodecamp
- udacity
- udemy

Be part of a community as they are your main source of growth and support

FRONTEND VS BACKEND DEV

Frontend Developers work on the design of a website. This includes how the site looks like and its interactivity. Basically the focus on the **beauty** and **user experience**

None of the two is better than the other as they rely on your strong suit.

Depending on who you are you can either do one of them both

Backend Developers on the other hand work on the behind-the-scenes activities that happen when a user interacts with the site. The **Brains** that power the web.

I HAVE LEARNT ALL THESE, WHAT NOW?

- **Showcase your work** and let people know what you do
- **Take jobs/opportunities** that allow you to work on real projects and with other developers and people with different roles
- **Keep learning** - for a developer, the learning never stops as web technologies keep growing and changing thus its important to stay updated

Where to begin the search

Always start at home as they are the people who (mostly) believe in you regardless

TIME TO MAKE SOME MONEY

Once you have mastered one or two skills, its time to start looking for jobs.

- Through **social media** channels eg. linkedin twitter and facebook.
- **Visit businesses and companies** share what you do and what you could do for them
- Once you have done a **good job**, it is also easy to get **referrals**
- **Get a job** as a web developer for a company

THANK YOU

I am pleased to be part of this conversation. If you would like us to
talk more,
